

# Similar and Dissimilar Fractions

Fractions play a big role in our daily lives. Everything we do is part of our tasks or goals for the day. Without realizing it, you add up the parts of your day to see what you've completed.

Fractions are similar if they have the same bottom number (denominator) and dissimilar if they have different bottom numbers.

# Example:

Similar:  $\frac{1}{4}$  and  $\frac{3}{4}$

Dissimilar:  $\frac{1}{2}$  and  $\frac{3}{5}$
